

Chioma Eboaju-Nebor

Application Support & Implementation Officer — Loan Origination & Loan Management Systems

chiomaeboaju@gmail.com · github.com/chioma-eboaju-nebor · linkedin.com/in/chioma-eboaju-nebor

SUMMARY

Application support and implementation professional who takes lending software solutions from initial requirements through configuration, UAT, deployment, and live support. Comfortable owning the full delivery lifecycle rather than a single phase, and translating between business stakeholders, configuration teams, and end users. Core domain: loan origination, loan management, and core banking systems.

LIFECYCLE COVERAGE

Initiation → Requirements → Configuration → UAT → Deployment → Support / Hypercare

PROJECTS

Loan Origination System

Lending · Front office

Implementation covering application intake, credit checks, and approval workflow. Involved from requirements gathering through configuration, UAT coordination, and go-live support.

Loan Management Solution

Lending · Back office

End-to-end delivery of a platform handling disbursement, repayment schedules, and post-disbursement monitoring. Owned the bridge between business requirements and system configuration, then supported the live environment.

Core Banking Implementation

Core banking · Platform

Supported implementation of core banking functionality underpinning lending operations, including account and transaction processing tied to loan products. Worked across requirements, configuration, and UAT alongside the wider banking team, then handled post-go-live support.

CORE STRENGTHS

- Requirements gathering & stakeholder liaison (credit, ops, IT, end users)
- System configuration & UAT coordination
- Deployment & release support
- Incident triage and root-cause tracing (requirement vs. configuration vs. release)
- Post-go-live / hypercare support
